MSFVenom is a combinations of the MSFPayload and MSFencode tools, and is part of the Metasploit Framework originally developed by H. D. Moore in 2003. Metasploit is currently owned by Rapid7.

MSFVenom is a payload generator and shellcode encoder

MSFVenom is pre-installed on Kali Linux, and is available as a part of the Metasploit Framework

MSFVenom can be used to generate and encode a wide variety of shellcode payloads for use in exploits to open shells on target machines
